

## Swing Carriage

Swing Carriage - The load capacity of a forklift jib has a most of around 1935 lbs up to 6000 lbs on either the extended or retracted positions range. You may need to consult with a material handling specialist concerning the specific limits of your lift truck application. The load capacity ratings are intended for the jib itself and not the forklift or the utmost load which can be lifted safely making use of a certain lift truck. It is important to keep in mind that each time any accessories such as a forklift jib are fitted to the forklift, the new center of gravity created by the attachment will lessen the overall lift capability of the forklift. There are instructions available which offer information on how to correctly gauge these load limits.

Prior to the use of any lift truck jib, be sure that the shackles and hooks are correctly secured to the lift truck. Verify and also double check that the pins are tight. It is imperative that the load calculations are correctly done and double checked. Bear in mind to take into consideration the truth that rated capacities at times lessen each time the boom is in a raised position, whenever the boom is fully extended with telehandlers or even every time the mast is tilted forward.

Vital tips when making use of an adjustable jib is to never pull a load with this particular kind of accessory. These types of attachments are just designed for vertical raising. Additionally, refrain from letting the load swing. Use extreme caution each time a load is carried to be able to avoid tipping over the truck.
